

Activity: Creating data element groups and group sets

In this activity, you will create a data element group, RMNCAH - Antenatal Care, and a data element group set, RMNCAH.

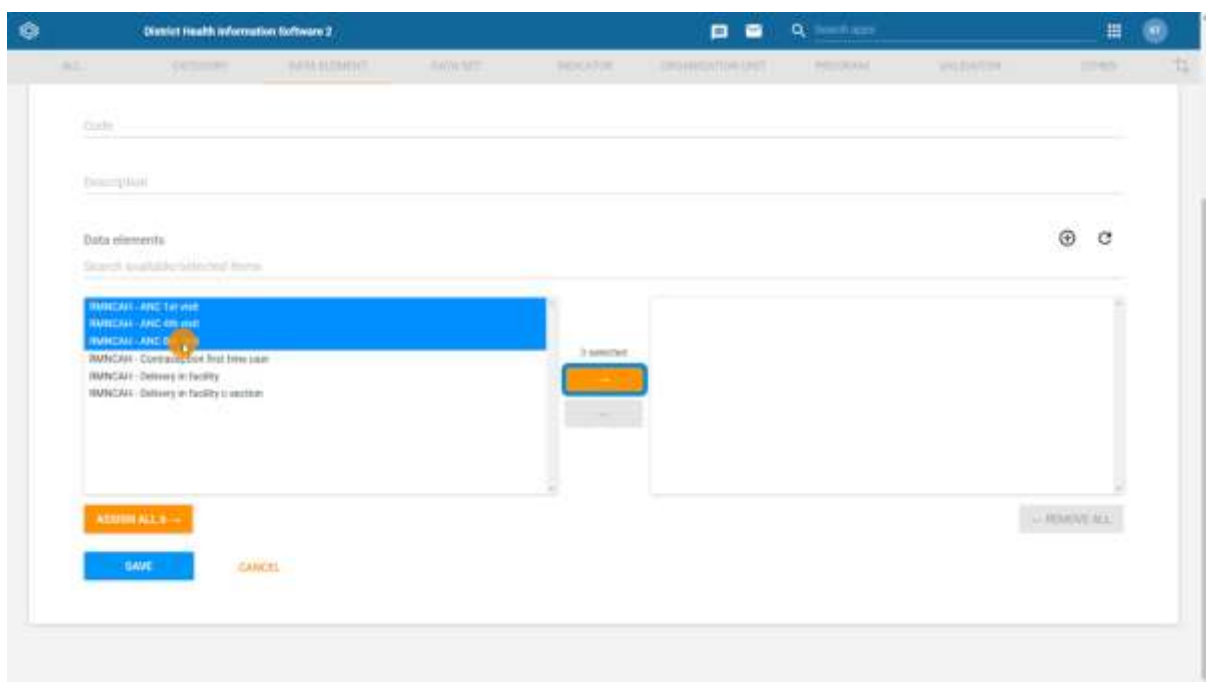

Instructions

Create a data element group: *Your initials*_RMNCAH - Antenatal Care

1. Sign in to your account in **DHIS2 Customization Practice**
2. In the **Maintenance app**, select the **data element tab**
3. Select the **data element group** from the left menu
4. Click on the **blue plus (+) sign** on the bottom right to add a new data element group
5. Fill in the fields:
 - a. **Name:** *Your initials*_RMNCAH - Antenatal Care
 - b. **Short name:** *Your initials*_RMNCAH - ANC
6. Assign the three data elements from the antenatal care section
 - a. Add *Your initials*_RMNCAH - 1st visit (that you have created in the last activity)

And add other two data elements from the ANC section

- b. RMNCAH - ANC 4th visit
- c. RMNCAH - ANC 8th visit

7. Click 'Save'

Create a group set: *Your initials*_RMNCAH

1. Navigate to the **data element group set management page**
2. Click on the **blue plus (+) sign** on the bottom right to add a new data element group set

3. Fill in the fields:

1. **Name:** *Your initials_RMNCAH*
2. **Short name:** *Your initials_RMNCAH*

4. Assign data element groups:

3. *Your initials_RMNCAH* -Antenatal care
4. RMNCAH - Delivery
5. RMNCAH - Family planning

5. Click '**Save**'

Now all the data elements in the RMNCAH data set are added into groups based on the area of care and all the groups are added into a RMNCAH group set that is set as a data dimension in the analytic apps.
