

## Links Activity: Configuring RMNCAH ANC 1-8 dropout rate (%)

In this activity, you will configure an indicator where you will use a mathematical operator: RMNCAH - ANC 1-8 dropout rate (%).

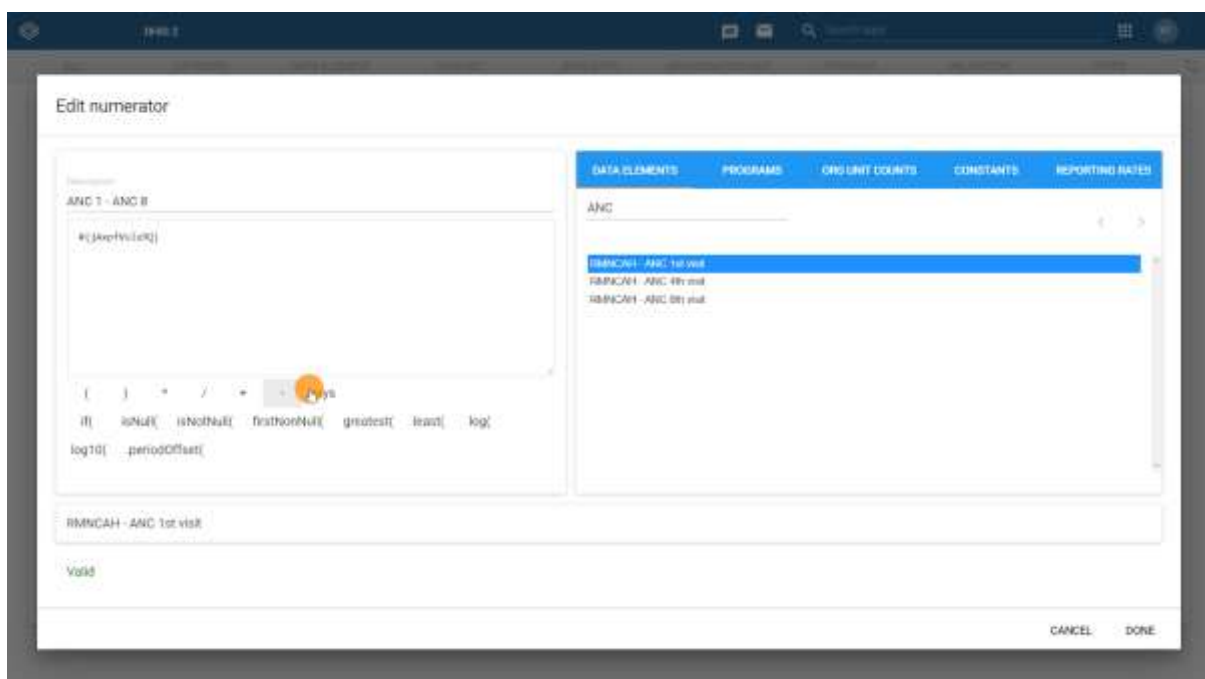

### Instructions

Create the indicator: *Your initials*\_RMNCAH - ANC 1-8 dropout rate (%)

1. Sign in to your account in **DHIS2 Indicators Practice**
2. Open the **Maintenance application**
3. Select **indicators tab** and navigate to the **indicators management page**
4. To create a new indicator click on the **blue plus (+) sign** on the bottom right
5. Fill in the fields:
  - a. **Name:** *Your initials*\_RMNCAH - ANC 1-8 dropout rate (%)
  - b. **Short name:** ANC 1-8 dropout rate (%)
  - c. **Description:** Numerator: ANC 1st visit - ANC 8 visit. Denominator: ANC 1st visit works as a proxy to measure the proportion of expectant mothers who did not complete the full course of recommended ANC visits after attending their 1st ANC visit. This data should be looked at yearly in a typical scenario.
  - d. **Indicator type:** 100

### Edit numerator

1. Open the configuration dialogue by clicking “**Edit numerator**”
2. Add the description “**ANC 1 - ANC 8**”
3. On the right-hand side, ensure the data elements tab is selected. In the “Search names” field, search for the data element “**ANC 1st visit**”
4. Double click on the data element to add it to the formula builder box
5. In the formula builder box, click on the “**-**” **button** and add it to the formula
6. Click on the area after the subtract symbol in the formula builder box

7. Search for the “ANC 8th visit” data element and double click it to add it to the formula
8. Click **“Done”**

### Edit denominator

1. Open the configuration dialogue by clicking ‘Edit denominator’
2. Add the description **“ANC first visits”**
3. On the right-hand side, ensure the data elements tab is selected. In the “Search names” field, search for the data element **“ANC 1st visit”**
4. At the bottom of the configuration dialogue, confirm that the formula is correct and the system gives a **“Valid”** response to the formula

The screenshot shows the 'Edit denominator' dialog box. On the left, the 'Description' field contains 'ANC 1st visits' and the 'Formula' field contains '#(jan+feb)'. Below the formula field is a toolbar with various mathematical and logical operators. At the bottom left, the text 'RMNCAH - ANC 1st visit' is displayed, and below that, the word 'Valid' is shown in green. On the right, the 'DATA ELEMENTS' tab is selected, showing a search bar with 'ANC' and a list of results: 'RMNCAH - ANC 1st visit', 'RMNCAH - ANC 8th visit', and 'RMNCAH - ANC 9th visit'. The bottom right corner of the dialog has a 'CANCEL' button and a yellow circular icon.

5. Click **“Done”**  
Click **“Save”**
